

PRE & POST TAN TIPS

- Do NOT tan if you are peeling.
- Please ensure you are early or on time as appointments are only 15 minutes apart
- In preparation for a tan please shave/wax/exfoliate (really exfoliate dry area's like elbows and knees) AT LEAST 6 hours before your tan, showering immediately before hand is not recommended as your pores may still be a damp & tan will not develop.
- Please bring comfy/loose dark clothing to put on after the tan (feel free to bring pj's, dressing gown, onesies etc) this happens more often than not. DO NOT MOISTURIZE OR USE DEODORANT BEFORE TANNING (wipes are available if you need to wipe underarms beforehand).
- KEEP AWAY FROM WATER & OTHER LIQUIDS UNTIL 1ST SHOWER.
- When it is time to rinse, have a warm 60 second rinse in the shower (no products), rinse until water runs clear & always pat dry after spray tanning.
- In many cases, the tan will almost completely fade after showering and the developing process will begin. Spray tans can take up to 24 hours to completely develop. Please do not wash hair during first shower.
- Shower as normal from Day 2 onward with a pH balanced bodywash. To keep your tan looking even and to ensure it lasts as long as possible please moisturize daily (for best results use a tan extender).
- Tight clothing such as jeans, leggings & bra's can leave dark marks where the clothing rubs, try to avoid very tight clothing for the first few days.
- Obviously pools contain chlorine and the amount in every pool-spa varies, chlorine is a bleach and will strip your tan. To remove the tan, soak in a bath and exfoliate with an exfoliating glove or flannel :)
